### ***Allowable Subject Matter***

3. Claims 1-4 are allowed.
4. The following is an examiner's statement of reasons for allowance.

The prior art does not teach the locking device as recited in claim 1, which includes an inner stem connected to a first handle, which may glide within an outer stem, a second handle at the upper end of the inner stem for controlling the locking of the inner stem in relation to the outer stem. inner stem that wherein a toothed friction element is arranged in the outer stem. The inner stem is equipped with a toothed blocking element locking into the friction element and preventing movement of the inner stem in relation to the outer stem when the blocking element is pressed into the toothed friction element by a conical groove of a housing influencing the position of the housing. The second handle is being configured to actuate positioning of the housing, when pivoted around an axis. This recitation, in combination with the rest of the recited elements, clearly defines over the prior art.
